KRISHNA VAMSHI VALUPADASU – DEVOPS ENGINEER

☎: +91 9603007662 | 📧: krishnavamshi.me@gmail.com | Warangal, Telangana | Linkedin | GitHub

OUTLINE

Results-driven DevOps Engineer with 4+ years of comprehensive experience in architecting, automating, and optimizing mission-critical deployments over large-scale AWS infrastructure. Proven expertise in Terraform, Kubernetes, Docker, and establishing robust CI/CD pipelines to dramatically accelerate software delivery lifecycles. AWS Certified Cloud Practitioner adept at seamlessly integrating DevSecOps principles, implementing zero-downtime deployment strategies, and establishing comprehensive observability across distributed systems. Focused on continuously improving scalability, enforcing rigorous security compliance, and driving operational excellence through end-to-end infrastructure automation and modern Site Reliability Engineering (SRE) practices.

KEY SKILLS

Continuous Integration & Continuous Deployment (CI/CD), Infrastructure as Code (IaC), Cloud Architecture & Migration, DevSecOps & Security Hardening, Container Orchestration & Scaling (K8s/EKS), Site Reliability Engineering (SRE), Microservices Deployment, Zero-Downtime Releases, System Observability & Monitoring, Technical Leadership & Mentoring

TOOLS & TECHNOLOGIES

Cloud And Os: AWS (VPC, EC2, S3, RDS, IAM, Lambda, ECS, Fargate), Linux (RHEL, Ubuntu, Amazon Linux 2), Windows Server
Devops And Iac: Docker, GitLab CI/CD, GitHub Actions, Terraform, AWS CloudFormation, Kubernetes (EKS), Jenkins, Ansible, Helm
Languages: Go (Golang), Python, Bash Scripting, JavaScript, SQL
Security: DevSecOps, Trivy, SonarQube, Vulnerability Scanning, IAM Hardening, KMS Encryption
Observability: Prometheus, Grafana, ELK Stack, AWS CloudWatch, Datadog
Certifications: AWS Certified Cloud Practitioner

PROFESSIONAL EXPERIENCE

DevOps Engineer | Infosys | Client: Goldman Sachs — Remote | Oct 2022— Present

Kubernetes Scale & CI/CD:

- Architected EKS-based GitLab CI/CD pipelines for Python and Go microservices, utilizing predictive scaling and performance tuning to reduce deployment time-to-market by 40%.
- Configured and managed large-scale Kubernetes (EKS) clusters, implementing Horizontal Pod Autoscalers (HPA) and Karpenter for efficient node scaling, handling high-traffic enterprise workloads seamlessly.

Leadership & SRE:

- Led cross-functional application migrations to UAT and Production for 3+ global engineering teams, mentoring junior engineers on zero-downtime deployment strategies and ensuring 100% release stability.
- Designed centralized observability and alerting systems utilizing Prometheus and Grafana, significantly improving incident response times and system reliability.

Infrastructure & DevSecOps:

- Provisioned highly available, multi-AZ cloud environments using Terraform, enabling true Infrastructure as Code (IaC) and ensuring 100% consistency across environments.
- Spearheaded the integration of DevSecOps practices by embedding automated vulnerability scanning (Trivy, SonarQube) into deployment workflows, mitigating critical security risks.

Video Editor | Fiverr — Remote | Aug 2019 — Sep 2022

Media Production & Automation:

- Managed comprehensive end-to-end post-production workflows for over 100 global clients, consistently delivering high-quality, high-retention media content under stringent deadlines.
- Established automated file management and cloud backup synchronization systems, ensuring zero data loss and accelerating project turnaround times by 30%.

KEY PROJECTS EXECUTED

Project: Cloud-Native DevSecOps Pipeline

Key Achievement: Automated a zero-downtime CI/CD pipeline for a Node.js microservice using GitHub Actions and AWS ECS Fargate, reducing manual deployment overhead by 100%. Hardened the software supply chain by integrating Trivy vulnerability scanning, identifying and mitigating critical security flaws (e.g., CVE-2026-22184) before production deployment, and optimizing container strategy reducing image storage footprint by 60%.

Project: Infrastructure as Code: Multi-Tier Production Environment

Key Achievement: Architected a highly available 3-tier AWS infrastructure (Web, App, Database) across multiple Availability Zones using Terraform. Engineered reusable custom modules for VPC, Compute, and RDS, reducing environment provisioning time by 80%, and implemented strict Environment Isolation (Dev/Prod) using S3 Remote State with native S3 locking.

EDUCATION

Bachelor of Technology in Mechanical Engineering | Balaji Institute of Technology and Science | Aug. 2016 - Jun. 2019 |
